

强限流饱和与动态抗饱和削顶缺额对比 ($I_{\max} = 4500 \text{ counts}$)

--- C2a: 无抗饱和 ($D_{\max} = 28306 \text{ counts}$) — C2b: 动态抗饱和 ($D_{\max} = 16806 \text{ counts}$, 降幅 40.6%) 负向限幅 $-I_{\max}$ (-4500 counts)

(a) 右电机实际施加电流指令 $i_{R,\text{cmd}}$

(b) 饱和请求未实现量幅值 $|\Delta i_R| = |i_{R,\text{ideal}} - i_{R,\text{cmd}}|$
